Date: 2007-11-01 With the CNC machine manufacturing in a wide range of applications. a large number of CNC operator training has become an urgent problem to be solved. In the traditional hands-on training in CNC programming and operation of effective training must be conducted on the actual machine. which only take the equipment processing time. but also has risks: the misuse of training often leads to costly equipment damage. The numerical simulation method using a computer simulation of CNC machine tools. greatly reducing the cost of learning. In particular the concept of virtual reality technology and the development. resulting in a processing device can simulate the actual state of the environment and its small computers for simulation training system. It uses computer simulation training system for training. not only the operator can rapidly improve the quality and safe. reliable. low cost. This tutorial is generated in this context. Readers respond to the traditional cutting of a certain basic knowledge to understand and master. and through the tutorial and a certain time of simulation training in order to achieve that initial grasp of the basic operation of CNC lathe training objectives. The book is divided into four chapters: Chapter YHCNC function; Chapter YHCNC operation; Chapter SIEMENS 802S Four Satisfaction guaranteed, or money back.
